

Run first docker compose to create docker containers:

```
cd RustLAB  
docker-compose up -d
```

To log in the docker container , find first the docker name (copy the container number):

```
# Find running containers  
docker ps
```

Then login:

```
docker exec -it e8fd3537d5f7 bash
```

To check if rust have been installed on the rust container , run this command:

```
rustc --version
```
